

Poorab Gupta

Agentic AI Developer | Noida, UP | +91 8445528948 | [Email](#) | [LinkedIn](#) | [GitHub](#)

Professional Summary

GenAI/Agentic AI Engineer with hands-on experience building production-oriented LLM applications using **LangChain**, **LangGraph**, and **RAG** pipelines. Skilled in designing multi-step **agentic workflows**, integrating third-party APIs, and deploying full-stack AI systems on cloud infrastructure. BCA graduate (CGPA **8.4**) from **JIIT Noida**.

Technical Skills

- **GenAI/Agentic:** LangChain, LangGraph, RAG pipelines, Prompt Engineering, Tool-calling, Vector Embeddings
- **LLMs/APIs:** Gemini models, Gemini embeddings, HuggingFace
- **Vector DBs:** Pinecone, Chroma, FAISS
- **Backend:** Python, FastAPI, Flask, REST APIs
- **DevOps/Cloud:** Docker, AWS EC2, Nginx, Git
- **Languages:** Python, C, Java basics

Projects

Aria - Personal Voice Assistant *(Python, LangGraph, Gemini API, faster-whisper, PyQt6)*

- Built a Jarvis-style **Windows voice assistant** using a LangGraph ReAct agent (Gemini 2.0 Flash) orchestrating 15+ tools across **OS control**, **media**, and **third-party APIs**
- Implemented a fully offline **speech pipeline** (faster-whisper STT, pyttsx3 TTS) with custom energy-based VAD and **wake-word detection**, eliminating per-request API costs
- Designed a **dynamic app-discovery system** (Windows Registry + Start Menu scanning) with **fuzzy matching**, removing the need for manual app configuration
- Built a custom PyQt6 **animated status overlay** (system tray + always-on-top orb) reflecting real-time agent state
- Architected a **3-mode operating system** (Normal/Mute/DND) with thread-safe shared state, controllable via voice and GUI
- Followed **security-first practices**: git history remediation after credential exposure, **.gitignore** hygiene, and protected-process safeguards for destructive OS actions

YouTube RAG Chatbot - Chrome Extension

- Built a Manifest V3 **Chrome Extension** that answers questions from YouTube video transcripts using **RAG**
- Developed FastAPI backend using **YouTube Transcript API**, **LangChain**, **Gemini embeddings**, and **Pinecone** for vector storage and search.
- Used **Gemini 3.5 Flash** for response generation with context retrieved from video transcripts

Cyber.AI – NLP-Based Vulnerability Analysis Tool

- Built a **Python NLP** tool to analyse and summarize CVE vulnerability data
- Integrated **NVD** and **Vulners APIs** for real-time vulnerability data retrieval and classification

Education

Bachelor of Computer Applications (BCA) - Jaypee Institute of Information Technology (JIIT), Noida

CGPA: 8.4

Secondary Schooling (CBSE) - **Science** @ Our Lady of Fatima School, Aligarh.

Percentage: 89%

High Schooling (CBSE) @ Our Lady of Fatima School, Aligarh.

Percentage: 98%

Extras

- Co-founded a **JIIIT's coding club - ZENCODERS** and **mentored 50+ peers and juniors** in core programming concepts and logics through **lecture sessions** and **presentations**.
- I spot gaps and build niche, **non-obvious projects** (e.g., Cyber.AI for CVE vulnerability analysis) rather than following standard portfolio patterns
- I **analyse and reverse engineer** problems efficiently. This has helped me solve errors faster. (e.g., pinpointed why Gemini's tool-calling was silently failing by testing each part of the conversation flow separately)
- **Self-directed learner** - designed and executed a structured **7-phase GenAI roadmap** solo, translating it into **4+ projects**
- **Strong research skills** - quickly digs through docs, forums, and source code to solve undocumented issues across Windows, Docker, and cloud environments
